

SecureDrive™

THE SAFEST COLD WALLET SOLUTION FOR YOUR CRYPTOCURRENCY

The advent of digital currencies has revolutionized how we earn, spend, and store assets. Unlike traditional forms of currency, holders of cryptocurrency manage the accessibility and security of their assets themselves via two critical elements: a public key and a private key.

Cryptocurrencies such as Bitcoin and Ethereum are decentralized forms of digital currency that allow owners to purchase items or store their money largely anonymously. Cryptocurrency relies on public and private keys to establish ownership on the blockchain, which serves as a public ledger of cryptocurrency transactions.

Your public key serves as an address for these transactions, and your private key unlocks those transactions. Each is crucial for conducting any transactions on the blockchain. In order to keep cryptocurrency keys safe, you need a storage solution that provides ultimate security, efficiency, and remote management capabilities. In short, you need SecureData's award-winning SecureUSB BT flash drive.

Keep Your Private Key Cold

Finding a safe way to store your private key is vital to the security of your cryptocurrency. Without it, your digital assets are worthless. Just ask the dozens of cryptocurrency early adopters whose carelessness in securing their private keys has shut them out of millions of dollars worth of Bitcoin.

Cryptocurrency holders have a variety of "wallet" solutions available, from a simple printed sheet of paper to a portable storage drive to a "hot" wallet incorporated in an online account or mobile app. But effective security for your private key requires storage that is offline, encrypted, and capable of remote management.

SecureUSB BT devices, which are authenticated via a secure mobile app, provide cryptocurrency holders the safest cold wallet storage solution on the market. Private keys remain offline to reduce the threat of compromise by cyberattack. They are protected by military-grade hardware encryption. And in the event of loss or theft, the drive can be remotely managed to prevent unauthorized access.

SecureDrive™ – the Crypto Wallet Solution You Can Trust

SecureData has been a leader in hardware-encrypted portable storage solutions for more than a decade. SecureUSB devices provide the highest level of protection for your cryptocurrency keys of any cold wallet option.

The cryptocurrency wallet market is a crowded field. When it comes to protecting your digital currency investments, don't settle for half measures. Choose a trusted partner with a proven record of achievement in data protection and technological innovation.
