Complete BitLocker Solution

Our complete solution can bring you into compliance with regulations and put you back in control of your corporate assets.

By storing the Bitlocker key on our Secure USB, Bitlocker is now :

- More Secure
 - Physically Separate
 - Multi-factor Authentication
- Remotely Managed
 - Help Users with Passwords
 - Reset Passwords
 - Disable Access
 - Remote Lock & Unlock
 - Control Access - Geo-Fence

SecureUSB® BT

Our Secure USB Token is used to house the BitLocker Key and is the key to regaining control over remote enterprise assets but it may also be used as a secure flash drive. The Secure USB Token is fully encrypted, and FIPS140-2 level 3 validated drive!

With Securedata's Remote Management Suite, you can allow or disallow access to every USB device. You decided which users, can use which drives on which computers. You can grant or revoke read write privileges. It's USB access that can comply with GDPR and HIPAA requirements.
